

1. Project Overview

This document is the single authoritative specification for the InnovateHealth Africa (IHA) website revamp. It is written for the lead developer and should be treated as the primary reference for all build decisions. Where this document conflicts with verbal or informal instructions, this document takes precedence. Any deviation from the specifications below must be confirmed in writing by the IHA project lead before implementation.

The existing website lives at www.innovatehealth.africa. The revamp covers the homepage, about page, all pillar pages (Training Programmes, Research, Innovations, Partnerships), navigation, footer, and a new content management admin panel. No existing pages should be deleted until replacements are confirmed live and approved.

Live URL	www.innovatehealth.africa
About Page	https://innovatehealth.africa/about
Tech Stack	As per current build — developer to confirm and flag any stack constraints before beginning
Scope	Homepage, About, Training Programmes, Research, Innovations, Partnerships, Navigation, Footer, Admin Panel
Admin Panel	Required — see Section 10 for full specification
Asset Delivery	IHA will supply all images, logos, and video footage. Developer must not use AI-generated imagery.
Timeline	To be agreed between developer and IHA project lead

SECTION A

Homepage — Tagline & Hero

A1. Replace the Main Headline

Remove the current headline entirely. Replace it with the following copy, exactly as written:

Static portion:

"We are advancing Equitable Healthcare in Africa through [ANIMATED PHRASE]"

Animated phrase rotates through:

Innovation → Research → Workforce Capacity Development

A2. Animated Text Specification

The animated phrase must cycle continuously and automatically without user interaction. The full sentence reads:

"We are advancing Equitable Healthcare in Africa through [phrase]"

Animation type	Typewriter effect — characters appear one by one as if being typed, then the phrase pauses, fades or deletes, and the next phrase begins typing
Reference	Study the homepage animation at www.ideo.com and replicate the same style and feel
Cycle order	Innovation → Research → Workforce Capacity Development → back to Innovation (loops indefinitely)
Pause duration	Each phrase should remain fully visible for approximately 2 seconds before transitioning
Typing speed	Natural, readable pace — not too fast, not too slow. Match the IDEO.com feel
Cursor	Display a blinking cursor while typing. Remove cursor during the pause phase
Colour	Animated phrase should be visually distinct from the static text — use IHA teal (#006666) or white depending on hero background contrast
Mobile behaviour	Animation must work correctly on all screen sizes. Text must not overflow or wrap awkwardly on mobile.

A3. Remove Sub-Text

CRITICAL: Remove the sub-text line that currently reads 'By Africans for Africa' permanently. Do not replace it with anything.

SECTION B

Homepage — Portfolio Cards Section

B1. Section Title Change

Current title	Our Work
New title	Our Portfolio of Change

Placement	Section heading directly above the three cards — same position as current title
------------------	---

B2. Remove Existing Cards

Delete all three current cards entirely:

- Africa Health Innovation Fellowship
- Healthcare Innovation Workshop
- Open Innovation Lab

NOTE: These items are not being moved — they are being removed from this section. AHIF content moves to the Training Programmes page. See Section F.

B3. New Card Content — Exact Copy

Replace with exactly three new cards using the content below. Copy must be implemented character-for-character with no edits.

CARD 1 — Workforce Capacity Development

Card Title	Workforce Capacity Development
Description	We design and deliver competency based training in digital health that equip health workers from the frontline to the leadership level with the competence, confidence and capability to deliver better care, make smarter decisions, and grow within a health system that is rapidly evolving.
Button Label	Explore Our Training Programmes →
Button Action	Navigate to /training-programmes (internal page — see Section F1)
Image	IHA to supply actual photography. DO NOT use AI-generated or stock imagery. Placeholder accepted during build but must be replaced before launch.

CARD 2 — Implementation Research

Card Title	Implementation Research
Description	We generate scientific evidence on how digital health is actually being experienced across African health systems, what is working, what is not, and what the data is telling us. We turn implementation

	insight into knowledge that shapes better programmes, stronger policies, and smarter investment.
Button Label	See Our Research Work →
Button Action	Navigate to /research (internal page — see Section F2)
Image	IHA to supply actual photography. DO NOT use AI-generated or stock imagery.

CARD 3 — Innovation

Card Title	Innovation
Description	We work with public and private health institutions to design, develop, and implement digital health solutions that are shaped by the communities they serve.
Button Label	Discover Our Innovations →
Button Action	Navigate to /innovations (internal page — see Section F3)
Image	IHA to supply actual photography. DO NOT use AI-generated or stock imagery.

B4. Card Design & Animation Requirements

The three cards must be restyled. The current static card design is insufficient. The following design and animation behaviour is required:

Card Layout

- Cards must sit in a 3-column horizontal grid on desktop
- On tablet: 2 columns, third card drops to a new row centred
- On mobile: single column, cards stack vertically
- Cards must have equal height within the same row regardless of content length
- Each card contains: image (top), card title, description text, CTA button (bottom, pinned)
- Image area: fixed height of 220px, full card width, object-fit: cover — image fills space without distortion
- Adequate internal padding on all sides — minimum 24px
- Subtle drop shadow on card container to lift cards off the background
- Rounded corners: 8px border-radius

Card Animation — Hover State

When a user hovers over a card on desktop, the following must happen:

- The card lifts slightly — apply a translateY(-6px) transform
- The drop shadow deepens to reinforce the lift effect
- The card title changes colour to IHA teal (#006666)
- The CTA button transitions from its default style to a filled teal background with white text
- All transitions must be smooth — use CSS transition with 0.25s ease timing
- No jarring jumps or flashes

CTA Button Animation

- Default state: outlined button — teal border, teal text, transparent background
- Hover state: filled button — teal background (#006666), white text, no border visible
- The arrow (→) in the button label should animate slightly to the right on hover — 4px translateX
- Transition: 0.25s ease on all properties

B5. Remove View More Button

CRITICAL: Remove the 'View More' button that currently appears below the cards section. Do not replace it. Each card's individual button handles navigation directly.

B6. Remove Testimonials Section

CRITICAL: The entire testimonials section must be removed from the homepage. Remove all associated HTML, CSS, and JavaScript. Do not archive or comment out — delete it cleanly.

SECTION C

Navigation Menu Changes

C1. Programs Dropdown — Rename Sub-Items

The top-level 'Programs' tab remains. Only the dropdown sub-items change:

Current: Programs and Projects	Rename to: Training Programmes
Current: Products & Tools	Rename to: Innovations
Research	No change — leave exactly as is
Partnership	No change — leave exactly as is

C2. Navigation Routing — Each Sub-Item Must Link to Its Own Page

Each of the four dropdown items is a standalone page. The pages and their routing are:

Training Programmes	/training-programmes — page already exists, rename only, content to be updated per Section F1
Innovations	/innovations — NEW page to be created, content per Section F3
Research	/research — NEW page to be created, content per Section F2
Partnership	/partnership — page already exists, no structural change needed, logos to be updated per Section G

C3. Card Button Routing

Confirm that each homepage card button links to the correct page:

- 'Explore Our Training Programmes' → /training-programmes
- 'See Our Research Work' → /research
- 'Discover Our Innovations' → /innovations

IMPORTANT: These routes must be consistent across the navigation dropdown and the homepage card buttons. If the URL structure changes for any reason, update both locations.

SECTION D Join Community Button

D1. Activate the Join Community Button

Button label	Join the Largest Community of Healthcare Innovators (current label — do not change)
Action	Open the WhatsApp community link in a new browser tab
Link URL	https://chat.whatsapp.com/LRE8WPsqyQ9ETktAcfZxgy?mode=gi_t
Target	target='_blank' — must open in new tab, not replace current page
rel attribute	Add rel='noopener noreferrer' for security

IMPORTANT: Test this link before go-live. WhatsApp community invite links can expire. IHA to confirm the link is still active at launch time.

SECTION E

Partnership Carousel

E1. Add New Partner Logos

Add the following six organisations to the existing partnership carousel. Logos for all six will be supplied by IHA:

- Africa Nazarene University
- Social Entrepreneurship and Innovation Hub
- Futurize
- MTN Innovation Lab
- ALX Kenya
- TORG
- GITEK Africa

Logo format	SVG preferred, PNG with transparent background acceptable
Logo dimensions	Consistent height across all logos — standardise to 60px height, auto width
Existing logos	Retain all existing partner logos — do not remove any
Carousel behaviour	Auto-scrolling carousel — no change to existing behaviour unless it is currently broken
Hover state	Logos should display at reduced opacity (60%) by default and reach full opacity on hover, to keep the carousel visually clean

IMPORTANT: Do not begin implementing logos until IHA has supplied the actual logo files. Do not source logos independently from the internet.

SECTION F

Page Content — All Pillar Pages

All four pillar pages follow the same structural pattern. Each item on every page is displayed as a card. The card template is described in F0 below and applies identically to all four pages.

F0. Universal Card Template — Applies to All Pages

Every item on every pillar page (training programmes, research, innovations, partnerships) must use this card structure:

- Image area — full card width, fixed height 240px, object-fit: cover, rounded top corners

- Card title — bold, 18–20px, IHA dark colour
- Description text — 14–16px, readable line height (1.6), max 3–4 lines before truncating with ellipsis on listing view
- 'Read More' button — at bottom of card, same animation behaviour as homepage cards (outlined → filled on hover)

Read More — Flash Page / Modal Behaviour

When a user clicks 'Read More' on any card, a detailed view opens. Developer may implement this as either a modal overlay or a dedicated sub-page — discuss with IHA before deciding. Whichever approach is chosen, the detail view must display:

- Full title
- Full image (larger format)
- Full description text with no truncation
- Any additional detail IHA provides (awards, links, dates, etc.)
- A clear close / back mechanism

CRITICAL: The card grid on all pillar pages must be managed via the Admin Panel. IHA staff must be able to add, edit, and remove cards without developer involvement. See Section J for Admin Panel specification.

F1. Training Programmes Page (/training-programmes)

This page already exists. Rename it from 'Programs and Projects' to 'Training Programmes' and update the content as follows. All existing content on this page is replaced by the items below:

Card 1 — Africa Healthcare Innovation Fellowship (AHIF)

- **Africa Healthcare Innovation Fellowship (AHIF) Title:**
- **Addressing the challenges of healthcare in Africa requires more than technology; it requires leaders who understand systems, context, and people. The Africa Healthcare Innovation Fellowship (AHIF) was designed to produce such leaders.** Description:
- **IHA to supply** Image:
- **Read More → (opens detail flash page)** Button:

Card 2 — Digital Health Workforce Readiness Initiative

- **Digital Health Workforce Readiness Initiative Title:**
- **Display a 'Coming Soon' label on this card — style as a small coloured badge overlaid on the card image (top-right corner), teal background, white text** Status badge:
- **Description:** Africa's health system is changing faster than the workforce has been prepared for. This programme equips frontline health workers with the practical digital competency they

need to navigate new tools, make better use of health data, and deliver care with greater confidence in an increasingly digital workplace

- **IHA to supply** Image:
- **Read More** → (links to detail page — or disable button and replace with 'Coming Soon' if IHA prefers) Button:

Card 3 — Digital Health Leadership Executive Programme

- **Digital Health Leadership Executive Programme** Title:
- **Display a 'Coming Soon' label — same style as Card 2** Status badge:
- **Description:** This programme is designed for the professionals inside Africa's health institutions who carry formal responsibility for digital strategy, systems, and change and who need structured development, a rigorous curriculum, and a peer network equal to the demands of that responsibility.
- **IHA to supply** Image:
- **Read More** → Button:

Card 4 — PitchYard (Healthtech Edition)

- **PitchYard (Healthtech Edition)** Title:
- **Built on a strategic thesis to expand the pipeline of investable African ventures, PitchYard provides a high-velocity environment for idea-stage healthtech founders to validate critical problems, stress-test early solutions, and capture the proof of traction required to scale across the continent.** Description:
- **IHA to supply** Image:
- **Read More** → Button:

F2. Research Page (/research) — NEW PAGE

This is a new page that does not currently exist and must be created. URL: /research. It appears in the navigation under Programs → Research.

Card 1 — AI-Powered Diagnostic Tools Review

- **AI-Powered Diagnostic Tools for Infectious Diseases in Low-Resource Settings: A Comprehensive Review** Title:
- **IHA to supply. Placeholder acceptable during build.** Description:
- **IHA to supply** Image:
- **Read More** → Button:

NOTE: IHA will supply additional research items as the page grows. All future additions must be manageable via the Admin Panel without developer involvement.

F3. Innovations Page (/innovations) — NEW PAGE

This is a new page that does not currently exist and must be created. URL: /innovations. It replaces 'Products & Tools' in the navigation and is renamed 'Innovations'.

Card 1 — AI-Powered Mpox Diagnostic Tool

- **AI-Powered Mpox Diagnostic Tool** Title:
- **An award-winning digital solution leveraging artificial intelligence to provide rapid and accessible diagnostics for Mpox, recognised and awarded a grant for further development at the 2025 Forum Galien Africa for its potential to improve outbreak response.** Description:
- **IHA to supply** Image:
- **Read More** → Button:

Card 2 — Digital Health Literacy Self-Assessment Tool (DHLSAT)

- **Digital Health Literacy Self-Assessment Tool (DHLSAT)** Title:
- **A scientifically validated diagnostic framework developed to align with continental health workforce digital readiness efforts. The DHLSAT empowers frontline healthcare professionals across Africa to precisely map their digital competencies, identify critical literacy gaps, and access tailored recommendations to accelerate digital readiness at the frontline.** Description:
- **IHA to supply** Image:
- **Read More** → Button:

Card 3 — Healthcare Innovation Toolkit

- **Healthcare Innovation Toolkit** Title:
- **A comprehensive resource hub for innovators to build user-driven healthcare products.** Description:
- **IHA to supply** Image:
- **Read More** → Button:

F4. Partnership Page (/partnership)

This page already exists. No structural changes are required. The only update is that all partner logos displayed in the homepage carousel must also be reflected on this page. When a new partner is added to the carousel via the Admin Panel, it must automatically appear on this page as well — they should draw from the same data source.

SECTION G

Newsletter & Email Subscription

G1. Working Subscription System

The newsletter subscription form must be fully functional. IHA has asked whether email addresses can be stored in a Google Sheet rather than a separate database. The recommended implementation is as follows:

Recommended Approach — Google Sheets via Google Apps Script

- Create a Google Apps Script Web App that accepts a POST request containing the subscriber's email address
- The script appends the email, timestamp, and source page to a designated Google Sheet owned by IHA
- The subscription form on the website sends a fetch() POST request to the Apps Script endpoint on form submission
- On success: display a confirmation message to the user — 'Thank you for subscribing!'
- On failure: display an error message — 'Something went wrong. Please try again.'
- Validate email format client-side before submission. Do not submit if the format is invalid.
- Prevent duplicate submissions — check against existing entries or add server-side deduplication in the Apps Script

Sheet ownership	IHA to create the Google Sheet and share edit access with the developer for setup
Sheet columns	Column A: Email Address Column B: Date and Time Column C: Source Page
Apps Script	Developer to write, deploy, and hand over the script URL to IHA
Security	Restrict Apps Script to accept requests from the IHA domain only where possible
GDPR / Privacy	Add a checkbox below the email field: 'I agree to receive updates from InnovateHealth Africa.' Submission must require this checkbox to be ticked.

SECTION H

News & Updates Section

H1. Content Categories

Add the following selectable categories to the News CMS. These must be selectable when creating or editing a news post:

- Latest Announcements
- Programs & Fellowships
- Research & Innovation
- Partnerships & Events

CRITICAL: Remove or permanently disable the 'Uncategorized' default category. Every post must be assigned to one of the four categories above. If a post is saved without a category, the CMS should prompt the author to select one before publishing.

H2. Category Filter on Frontend

On the public-facing news page, implement category filter tabs or buttons so visitors can filter news by category. All posts visible by default. Clicking a category shows only posts in that category. Active filter visually highlighted.

SECTION I About Page Updates

I1. Philosophy Section

Current section title	How We Make Impact
New section title	Our Philosophy
Action	Replace the title AND all existing content under it with the text below

EXACT COPY — implement character for character:

Most failure in health systems comes from distance — distance between who designs training and who delivers care, between where research is produced and where decisions are made, between what gets built and what people actually need. At IHA, closing that distance is not one of the things we do. It is how we do everything.

CRITICAL: The three existing cards under 'How We Make Impact' (Co-creating with the people, Workforce Capacity Development, Strategic Partnership) must all be removed. They are not relocated — they are deleted.

I2. Team Page Updates

Image style	Professional, clean image frames with consistent aspect ratio. Circular or rounded-square format — confirm with IHA before implementing.
Image dimensions	Standardise all headshots to same dimensions. Recommended: 400x400px, object-fit: cover
Required fields per team member	Full name, Role/Title, Professional headshot, LinkedIn profile URL
LinkedIn	Each team member card must display a LinkedIn icon that links to their individual profile. Opens in new tab.
Remove	Remove all outdated team member entries — IHA to supply updated list
Add	Upload new photos and information supplied by IHA admin
Consistency	All cards must be identical in size, layout, and style regardless of content length

NOTE: IHA will supply all new headshots and bios. Developer should build the card structure and apply placeholder frames. Final photos will be uploaded by IHA admin via the Admin Panel.

SECTION J

Footer

J1. Remove Non-Functional Links

Audit every link in the current footer. Remove any link that is broken, leads to a 404, or links to a page that does not exist. Do not leave dead links in place.

J2. Retain Only These Links

After cleanup, the footer should contain only the following:

- Core programmes (links to /training-programmes, /research, /innovations)
- News & Updates (links to /news)
- Contact page (links to /contact)
- Partnerships page (links to /partnership)
- Social media icons

J3. LinkedIn Requirement

LinkedIn link	Must be present and functional
Destination	Official IHA company LinkedIn page — IHA to supply the exact URL

Behaviour	Opens in new tab (target='_blank', rel='noopener noreferrer')
Icon	Use official LinkedIn brand icon

SECTION K

Admin Panel — Full Specification

This is a mandatory deliverable. An admin panel must be built that allows IHA staff to update website content independently without requiring developer involvement. This is not optional and must be included in the initial build scope.

CRITICAL: The admin panel must be secure, intuitive, and require no technical knowledge to operate. IHA staff are not developers. Every action in the admin panel must be achievable through a graphical interface with no code required.

K1. Access & Authentication

Login	Username and password login. No public registration — accounts created by developer and handed to IHA.
URL	Hosted at /admin or a subdomain such as admin.innovatehealth.africa — agree with IHA before implementing
Roles	Minimum two roles: Super Admin (full access) and Editor (can edit content but cannot manage users or settings)
Session security	Sessions must expire after inactivity. Implement HTTPS only. Passwords must be hashed — never stored in plain text.
Password reset	Admin must be able to reset passwords via a secure email link

K2. Manageable Content Areas

The admin panel must give IHA full control over the following sections of the website. Each is described below:

K2a — Training Programmes Page

Admin must be able to:

- Add a new training programme card — filling in: Title, Description, Image upload, Status (Active / Coming Soon), Read More link or detail content
- Edit any existing training programme card — all fields editable
- Delete a training programme card

- Reorder cards by drag-and-drop or up/down controls
- Toggle the 'Coming Soon' badge on or off per card without needing to delete and re-add the card

K2b — Innovations Page

Admin must be able to:

- Add a new innovation card — filling in: Title, Description, Image upload, Detail content (for the flash/modal view), any awards or recognition
- Edit any existing innovation card
- Delete an innovation card
- Reorder cards

K2c — Research Page

Admin must be able to:

- Add a new research card — filling in: Title, Description, Image upload, Authors, Publication date, Link to full paper (external URL), Detail content
- Edit any existing research card
- Delete a research card
- Reorder cards

K2d — Partnership Page & Carousel

Admin must be able to:

- Add a new partner — upload logo, enter partner name, optionally add partner website URL
- Edit an existing partner entry
- Delete a partner
- Reorder partners in the carousel via drag-and-drop
- Any partner added here must automatically appear in both the homepage carousel and the /partnership page — they must share one data source

K2e — Team Page

Admin must be able to:

- Add a new team member — enter: Full name, Title/Role, Department/Team category, Upload headshot image, LinkedIn URL
- Edit any existing team member record
- Remove a team member
- Reorder team members within their department group
- Assign team members to department tabs (Leadership, Design & Innovation, etc.) — tabs as currently displayed on the about page

K2f — News & Updates

Admin must be able to:

- Create a new news post — enter: Title, Category (from the four defined categories), Featured image, Body content (rich text editor — bold, italic, links, paragraphs, headings minimum), Publication date, Author name
- Edit any existing news post
- Delete a news post
- Save a post as draft (not visible on site) or publish it (visible on site)
- Schedule a post to publish at a future date and time

K2g — Homepage Cards (Portfolio of Change)

Admin must be able to:

- Edit the title, description, and image of each of the three homepage pillar cards
- The card titles and button labels are fixed — admin can update description and image only
- Admin cannot add or remove homepage cards — only edit existing three

K2h — Newsletter Subscribers (Read Only)

Admin must be able to:

- View a list of all email subscribers with their subscription date
- Export the subscriber list as a CSV file
- This view is read-only — no editing or deleting of individual subscriber records via the admin panel (deletions handled directly in Google Sheets)

K3. Image Upload Requirements

Every image upload field in the admin panel must enforce the following:

- Accepted formats: JPG, PNG, WebP
- Maximum file size: 5MB per image
- The system must automatically compress and optimise the image on upload for web performance
- Images must be stored in a consistent, organised folder structure on the server
- Admin must be able to preview the image before saving

K4. Admin Panel UX Requirements

- All forms must have clear labels, helpful placeholder text, and input validation
- Required fields must be clearly marked. The form must not submit if required fields are empty.
- After saving any change, display a clear success confirmation message

- If a save fails, display a clear error message explaining what went wrong
- All delete actions must require a confirmation step — 'Are you sure you want to delete this? This cannot be undone.' — before executing
- The admin panel must be fully responsive and usable on a tablet, as IHA staff may update content on the go
- Changes made in the admin panel must reflect on the live website within 60 seconds without requiring a page rebuild or developer action

K5. Admin Panel Handover

At project completion, the developer must supply IHA with:

1. Login credentials for all admin accounts
2. A written user guide (PDF or Google Doc) explaining how to perform every action available in the admin panel — written for non-technical users with screenshots
3. A video walkthrough (screen recording) of all major admin panel functions
4. Documentation of how the Google Sheets integration works and how to access the subscriber data

SECTION L

General Technical Requirements

L1. Performance

- All pages must achieve a Google Lighthouse performance score of 80 or above on mobile
- Images must be lazy-loaded — below-the-fold images should not load until the user scrolls toward them
- All images must be served in WebP format where possible, with JPG fallback
- No third-party scripts should be loaded unless strictly necessary

L2. Responsiveness

- Every page and component must be fully responsive across desktop (1440px), tablet (768px), and mobile (375px)
- No horizontal scrolling on any screen size
- Touch targets on mobile must be minimum 44px height

L3. Accessibility

- All images must have descriptive alt text
- All interactive elements must be keyboard-navigable
- Colour contrast must meet WCAG AA standard minimum
- All form fields must have associated labels

L4. SEO

- Every page must have a unique, descriptive <title> tag and meta description
- Heading hierarchy must be correct on every page (one H1 per page, H2/H3 in logical order)
- All internal links must use descriptive anchor text — no 'click here'

L5. Browser Support

- Chrome (latest 2 versions)
- Firefox (latest 2 versions)
- Safari (latest 2 versions)
- Edge (latest 2 versions)
- iOS Safari (latest 2 versions)
- Android Chrome (latest 2 versions)

L6. Analytics

Confirm with IHA whether Google Analytics or another analytics platform is currently installed. If so, ensure all new pages and renamed pages are tracked correctly. Verify that no analytics data is lost during the revamp.
